

I am an Amateur Radio Operator. My call sign is KC9ERZ.
Understanding the inherent properties of a HF RF signal, one knows that these RF signals will travel long distances by way of the Ionosphere. This cannot be stopped. This cannot be controlled. It is a simple matter of physics. BPL's use of frequencies within the HF spectrum will cause interference to Amateur Radio HF operators as well as all other services using space within the HF spectrum. Please consider this carefully. BPL should be stopped now.

Regards,
Greg Johnson
